Udemy is a popular e-learning destination where millions of students take thousands of classes by industry professionals. Classes are available in 10+ categories including development, business, marketing, photography, design, test prep, and more. Many of its top-rated free and paid courses focus on app development, programming, software, and other tech courses.

Anyone can create a course, self-publish, and teach on Udemy. The self-publishing approach helps Udemy attract new instructors daily and a variety of pedagogy and subjects. It also helps them to get influencers who want to make extra money. On the other hand, Udemy's open-door policy can attract unqualified teachers who produce subpar content. Moreover, some instructors crank out second-rate tutorials only to turn a quick buck, without regard for their students. For example, one instructor taught a course about passive income with his shirt off (very unprofessional), whereas another taught an offensive [course](#) called, "How to Hack a Girl." Udemy has since removed the content.

Udemy wants to provide an enriching platform and continues to raise its content standards. It must compete in the lucrative e-learning sector, where many worthwhile competitors are seeking market share. Secondly, Udemy is a department store of subjects with over 100 subcategories. That allows specialty and niche education sites to differentiate themselves and gain competitive advantages.

Websites Like Udemy & Best Alternatives

Let's explore several reputable alternatives to Udemy for programming, app development, ecommerce, business, marketing, finance, industry training, and art/creativity classes. The following e-learning platforms target all types of learners and ages with many providing course completion certificates.
